

FIRST-IN-THE-NATION ELECTRIC-POWERED COMPOST COLLECTION TRUCK

eco-cycle®

PIONEERING ZERO WASTE + ZERO EMISSIONS

THE NATION'S FIRST ELECTRIC-POWERED COMPOST TRUCK DEPLOYS IN BOULDER COUNTY IN 2022

With a history of developing local Zero Waste solutions, Eco-Cycle is pioneering the Zero Waste-Zero Emissions frontier with the nation's first electric-powered compost collection truck.

To realize all the climate benefits of composting without producing transportation emissions, Eco-Cycle will lead a transition toward electric-powered fleets for haulers in all industries—particularly waste, recycling, and composting—by purchasing and deploying the nation's first commercial-scale electric-powered collection truck for compostables, which will be operational in spring of 2022.

Thanks to a grant awarded from the Alternative Fuels Colorado program, Eco-Cycle has obtained foundational funding to purchase a Mack LR EV truck for use as our frontline vehicle to collect compostables generated by our many commercial and institutional clients. The electric-powered compost collection truck, which will travel roughly 15,000 miles each year, will help reduce greenhouse gas emissions by 2,500 tons over the vehicle's lifetime.

We now seek partnerships with a select group of mission-aligned businesses to support our goal of servicing two critical climate solutions: **zero waste and zero emissions.**

With 2/3 of funding for the electric-powered truck secured, we seek additional funding from businesses who believe that investing in electrifying commercial transportation is key to reducing climate change impacts.
